Credit Card Processing Equipment Sale FAQ

Can you tell me the more about the specific models?

Please visit manufacturer web sites for further product information

www.Verifone.com for Verifone, Hypercom, Lipman, Way and Nurit.

www.FirstData.com for FD series

www.dejavoosystems.com Ingenico.com

ALL MODELS ARE THE BASE UNIT. If you need extra memory or other options, please request a quote.

How can I pay for equipment?

We accept Visa, MasterCard, Discover, paypal, and check. Equipment ships on confirmed payment acceptance. For checks, there will be a hold until funds clear.

Do you offer overnight replacement equipment if me equipment fails? This type of warranty can only be purchased at the time you order and typically costs \$75 per year and up, with a maximum of 3 years. Call for a quote.

Do you offer leasing? Leasing options are only available with a new merchant account.

Will you program my machine?

For security reasons, we do not program machines if your credit card processing is managed by another party. If the machine is pin-debit capable, it needs to be injected with pin key encryption at an approved facility. We can only perform the injection service for merchant accounts we manage.

Is there an additional fee for wireless?

Yes. See our blog article [wireless credit card terminal FAQ](http://www.3dmerchant.com/blog/merchant-processing-services/wireless-credit-card-terminal-faq/)

<http://3dmerchant.com/blog/merchant-processing-services/wireless-credit-card-terminal-faq/>

Contact your merchant processor for fees.

Do you offer quantity discounts?

For 10+ units with a base price over \$250 per unit, please call.

What is PCI?

Payment Card Industry. PCI is indicated next to machines that meet current PCI Data Security Standards as of 7/1/2011 and through 12/31/2011. To guarantee your unit is PCI Compliant, contact your merchant provider or visit this web site <https://www.pcisecuritystandards.org>

Is the machine compatible with my processor?

You must call your processor to ask. Even if a unit is PCI Compliant, a processor may limit which machines they will board on their network.

Do you offer credit card processing?

3D Merchant staff includes a registered specialty merchant services agent for medium to large businesses. Minimum \$100,000 per year to request a consultation.

BULLETIN: If you do not accept cards in person, DO NOT BUY A MACHINE. Key punching card data in dial up terminals is out of date. Save money and use a Virtual Terminal FREE via a secure web page. Call for more details.

We verify the identity of all buyers for security purposes.
